Patient walks out

0 patients

0 lost to long waits 0 explicitly stated they walked out 7 wrote churn reviews

What's happening: 0 patients mentioned long waits in their reviews. Among them, 0 also complained about never getting a callback.

What you can't see: Patients don't always announce they're leaving. Most leave quietly — you only find out when they stop booking.

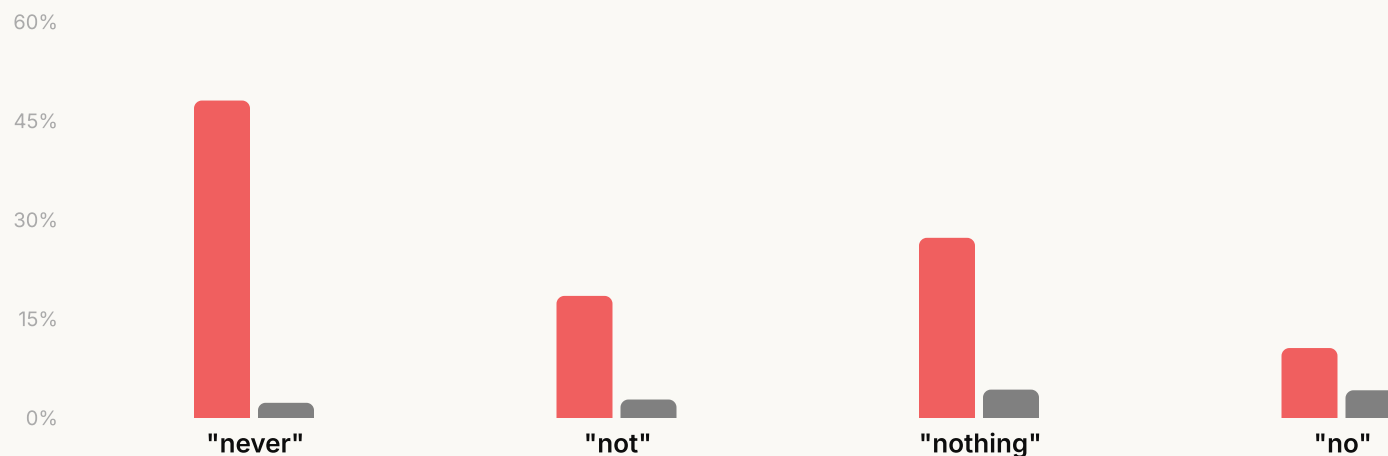

Action: Start with the 0 patients who complained about wait times. Click "View the 0 patients" above to read exactly what they said.

04

WORDS TO
LOOK FOR

Words in reviews that predict patient loss.

PATIENT LOSS RATE WHEN WORD APPEARS VS WHEN ABSENT

"never" 48.1% loss +45.8pp significant

Appears in 27 reviews · 13 patients lost · odds ratio 39 · $p < 0.0001$

The word "never" is the single most dangerous word in your patient reviews. It appears in 27 of your reviews, which is 5.4 percent of all feedback. Of these appearances, 96.3 percent are in low-star reviews rated 1 to 3, meaning these patients are unhappy. When a patient leaves a low-star review containing "never", 50.0 percent of them leave your practice. That is 6.3 times higher than low-star reviews that do not contain this word. Across all reviews including high-star ones, the loss rate is 48.1 percent compared to 2.3 percent. This result is statistically confirmed with a p-value of < 0.0001 . The 13 patients who left all came from this low-star group. Therefore, you should implement an immediate protocol. Every low-star review rated 1 to 3 stars that contains the word "never" should trigger a same-day callback from the practice manager. Do not call patients who leave 4 or 5 star reviews with this word, as they are satisfied.

[View top 5 reviews →](#)

"not" 18.5% loss +15.7pp significant

Appears in 65 reviews · 12 patients lost · odds ratio 7.981 · $p < 0.0001$

The word "not" is the single most dangerous word in your patient reviews. It appears in 65 of your reviews, which is 13.0 percent of all feedback. Of these appearances, 90.8 percent are in low-star reviews rated 1 to 3, meaning these patients are unhappy. When a patient leaves a low-star review containing "not", 20.3 percent of them leave your practice. That is 1.8 times higher than low-star reviews that do not contain this word. Across all reviews including high-star ones, the loss rate is 18.5 percent compared to 2.8 percent. This result is statistically confirmed with a p-value of < 0.0001 . The 12 patients who left all came from this low-star group. Therefore, you should implement an immediate protocol. Every low-star review rated 1 to 3 stars that contains the word "not" should trigger a same-day callback from the practice manager. Do not call patients who leave 4 or 5 star reviews with this word, as they are satisfied.

[View top 5 reviews →](#)

"nothing" 27.3% loss +23pp significant

Appears in 11 reviews · 3 patients lost · odds ratio 8.357 · $p = 0.0125$

The word "nothing" is the single most dangerous word in your patient reviews. It appears in 11 of your reviews, which is 2.2 percent of all feedback. Of these appearances, 81.8 percent are in low-star reviews rated 1 to 3, meaning these patients are unhappy. When a patient leaves a low-star review containing "nothing", 33.3 percent of them leave your practice. That is 2.5 times higher than low-star reviews that do not contain this word. Across all reviews including high-star ones, the loss rate is 27.3 percent compared to 4.3 percent. This result is statistically confirmed with a p-value of 0.0125. The 3 patients who left all came from this low-star group. Therefore, you should implement an immediate

protocol. Every low-star review rated 1 to 3 stars that contains the word "nothing" should trigger a same-day callback from the practice manager. Do not call patients who leave 4 or 5 star reviews with this word, as they are satisfied.

[View top 5 reviews →](#)

"no" 10.6% loss +6.4pp

Appears in 47 reviews · 5 patients lost · odds ratio 2.719 · p=0.0640

The word "no" appears in 47 of your reviews, which is 9.4 percent of all feedback. Patients who write it leave at 10.6 percent, compared to 4.2 percent for those who do not. That is a 6.4 percentage point gap, but it has not yet crossed the threshold for statistical significance. The p-value is 0.0640. This is a pattern worth watching. Your sample may simply be too small to confirm it yet. If this trend holds as more reviews come in, it will become a significant signal. Do not ignore it. Manually read all 47 reviews containing "no" now.

CHURN RATE: WAIT COMPLAINERS VS OTHERS

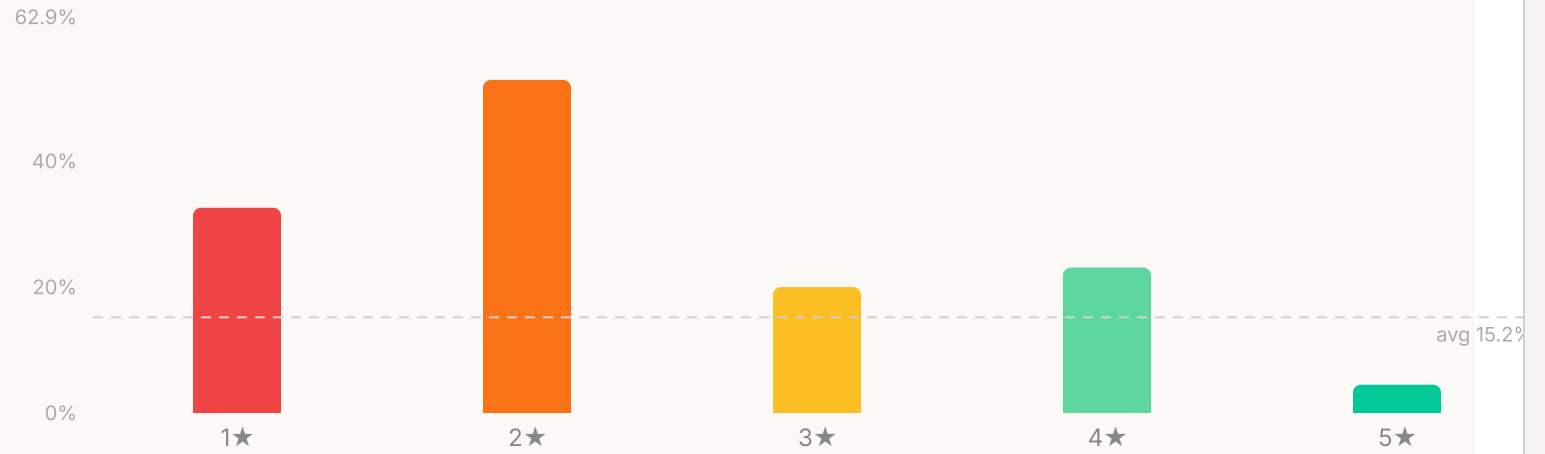

What we measured	The number	What it means for YOUR practice
Patients who complained about waiting AND stopped coming	15.8%	Out of 76 patients who mentioned long waits, 12 never came back
Patients who never complained about waiting AND stopped coming	2.8%	Out of 424 patients who didn't mention wait time, only 12 left
The extra risk from wait time complaints	+13%	Complaining about wait time makes a patient 6 times more likely to leave your practice

Interpreted insight from your data: Among patients who complained about wait time, 16% left your practice. That's 13 percentage points higher than patients who didn't mention waiting. For every 10 patients who complain about wait time, 2 are gone.

These results are statistically significant ($p = < 0.0001$). This means the probability that this pattern happened by chance is less than 5%. You can trust this data.

Fisher's exact test: $p = < 0.0001 \cdot \text{Odds Ratio} = 6.438\times$

10 of these patients left negative ratings (≤ 3★). The remaining 0 still rated you positively, but they noticed the wait.

WHAT TO FIX FIRST

MODERATE RISK

- 1 Audit your scheduling system — are appointment slot durations realistic for your procedure mix?
- 2 Train front desk to proactively acknowledge delays and set arrival expectations.
- 3 Add buffer slots between complex procedures.
